

# Graduate Level Child Seat Recycling

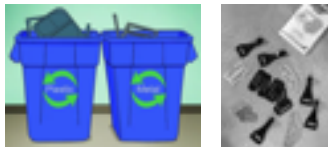

## Brought to you by NARPRO & Safe Kids Maricopa County

**AT ALL TIMES: SAFETY FIRST!**

**THE SAFETY OF YOU AND THOSE AROUND YOU IS OUR PRIMARY CONCERN.**

Sort @ all stages

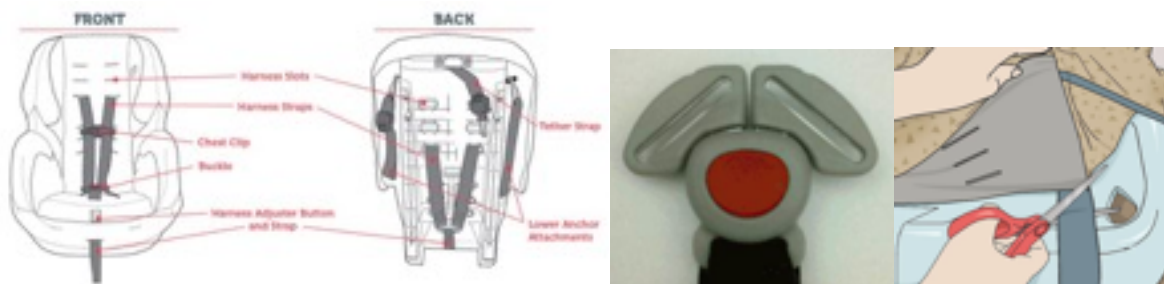

Separate plastic, metal and paper throughout deconstruction.

**Stage 1**      **Going to the Dogs**      <https://www.maricopa.gov/3560/Animal-Care-and-Control>

Remove all fabric, padding, and straps. Quilted fabric becomes bedding +/- or chew toys for the animals.

It may be necessary/efficient to cut some straps; however, long straps (i.e., tethers) make free leashes.

**Stage 2**      **Waste Not, Want Not**

We've repurposed long straps and plastic-metal fasteners with both male & female components.

MINIMIZE WASTE Cut as close as you can safely - Short strap pieces are waste as is any soft foam :(

**Stage 3**      **Make a Home**      Earth Friendly Building Materials, LLC <http://www.efbm.com>

Clean Polystyrene foam (rigid foam) will be recycled into Earth Friendly Block™

**Stage 4**      **Hand me a tool**

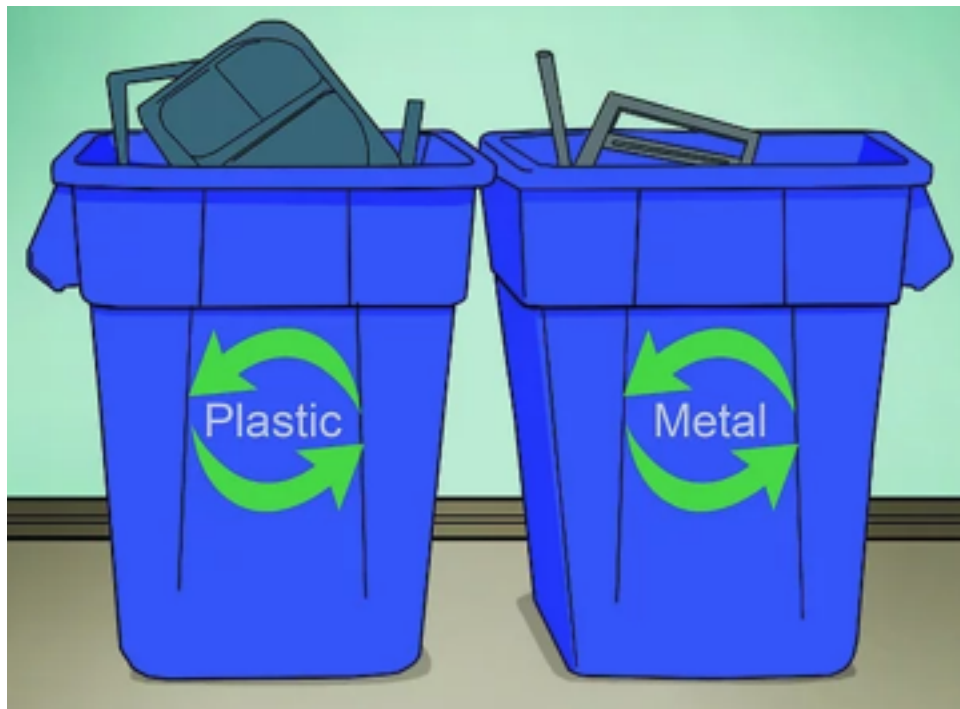

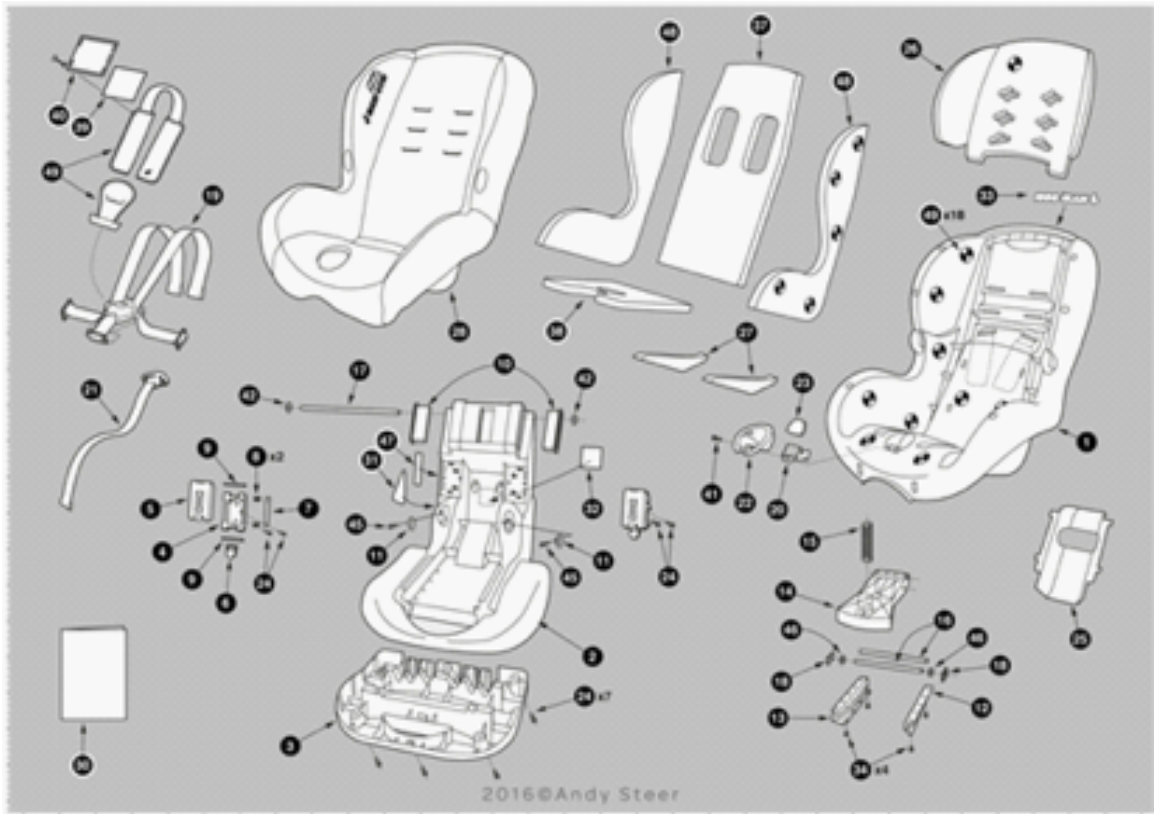

Remove any metal (or plastic) fasteners with the hand tools provided.

Be meticulous. Get it down to the base plastic shell, but if it's smaller than a nickel it can stay.

**Stage 5      Boyd's Power Center**

Tim Taylor from Tool Time would love to work this stage. We utilize an assortment of power tools to separate remaining metal from the plastic shell.

**Stage 6      Clean Up**                      We're done when the area is cleaner than when we arrived!
